

eToken Web Sign On (WSO) - Your Digital Identity Organizer

Users can now securely store and manage all their web login credentials. You ensure that only authorized people access information. All it takes is a single eToken password!

- How many times have your users written their passwords on a piece of paper, kept them in their wallets, or pasted them onto their computer screens so they wouldn't forget them?
- How many times have your users tried to use the same password for multiple applications to make them easier to remember?
- How much does it cost to manage passwords across your organization?

If any of these are a problem, we have the solution for you.

eToken WSO enables easy, convenient and secure storage of all of your users' web logon and access credentials directly from a web page. A user can insert any password, as long and complex as they wish, and never worry about remembering it. And you get peace of mind, knowing that your passwords are uncompromised, your information safe, and your networks secure, only to be accessed by authorized users.

eToken stores all necessary logon information including passwords, PIN numbers, account numbers, credit card details, telephone numbers, URLs, expiration dates and account notes. eToken WSO gives users instant access to all their Internet web accounts by recognizing the saved page and automatically filling it out upon presentation of their simple eToken password.

**SIMPLE SIGN ON
WEB PASSWORD AND FORM FILLER**

Benefits

- Enables users to access multiple web accounts using a single eToken
- Allows users to take their passwords with them wherever they go
- Requires no changes to the web application
- Manages multiple logon IDs and passwords
- Protects the user's sensitive data and personal information
- Enables a variety of other security services

Save and Automatic Fill-In

eToken WSO provides your users easy access to all their web accounts by conveniently saving logon credentials and submitting them automatically.

Immediate access to your bank account online

eToken

- eToken PRO - RSA 1024 / 3-DES / SHA-1, (onboard RSA 1024 operations)
- eToken R2- DESX 120-bit (secure storage of private keys)
